

DESTEMMERS

FOR GENTLY SEPARATING FOREIGN BODIES

—

These durable, reliable destemmers are designed for hand picking or mechanical picking, and are easy to clean and maintain.

Testimonial

We have used PERA destemmers in our cellars for many years. This reliable, durable equipment allows us to separate stems, leafstalks, and leaves from the harvest, along with any foreign bodies, avoiding any breakdowns in the rest of the process. Our destemmer has a harvest selector that lets you choose between "harvests to be cleaned" and those "already clean". In the latter case, it bypasses the destemmer and avoids crushing grapes that have already been destemmed. The rotational speed of the destemmer shaft can be adjusted ensuring quality processing at a rate of approximately 50 t/hr.

H400

H600 with PHM 600

H1000

H400 - swivel spatulas and washing ramp

GENTLE BUT EFFICIENT DESTEMMING OF THE HARVEST

- Large diameter cage that rotates independently of the destemming shaft
- The destemming shaft comprises fingers with swivel spatulas
- PELLENC PERA OENOPROCESS destemmers will ensure that you optimise the quality of your harvest

EASY TO USE

- Easy access to all the parts
- Quick and easy to adjust
- Easy to clean: built-in washing ramp
- H400 is a mobile, wheel-mounted destemmer

A RELIABLE AND STURDY DESIGN

- The rotational speed of the destemming shaft can be modified thanks to an electronic frequency converter with remote control
- Reliability: tried and tested robust construction

MODELS	NET WEIGHT (KG)	FLOW RATE* (T/H)	CAGE DIAMETER (MM)	RATED POWER (KW)
H400	260	5/15	400	1.8
H600	500	30	600	4.1
H800	1000	50	800	5.5
H1000	1,200	70	1000	7

*Flow rate depends on the plant, the type of vine, maturity, condition of the grapes, etc.
